

ROHAN BHAGAT

Senior QA Engineer | Manual, API & Automation Testing

bhagatrohan90@gmail.com 7219784663 Pune, Maharashtra

www.linkedin.com/in/rohan-bhagat-074236259/

CAREER OBJECTIVE

Results-driven Senior QA Engineer with 3.5 years in Manual, API, and Automation Testing across Agile (Scrum). Strong functional and regression coverage on iOS, web, and desktop for travel booking products, with deep REST API validation using Postman (request/response checks, status codes, partner auth, flight-hotel flows). Hands-on with Playwright and Node.js / Jest for UI and B2B API regression, and Selenium WebDriver, TestNG, and Core Java (POM) for scalable automation frameworks. Experienced in CI/CD (Jenkins, Git, Maven), SQL and MongoDB, JMeter for performance/load testing, and Elastic Kibana for log analysis. Skilled in STLC, SDLC, JIRA/TestRail defect lifecycle, test strategy, and partner/client technical support. Proven at turning complex business rules into effective test scenarios, improving coverage, reducing production defects, and enabling faster, reliable releases.

CORE COMPETENCIES

Manual Testing (iOS, Web, Desktop) | REST API Testing (Postman, response validation, partner auth, HMAC) | Functional / Regression / Integration / System / E2E Testing | Playwright UI Automation | Node.js / Jest B2B API Automation | Selenium WebDriver, TestNG, Core Java (POM) | BDD (Cucumber) | CI/CD (Jenkins, Git, Maven) | SQL & MongoDB | JMeter (Performance / Load Testing) | Elastic Kibana (log analysis) | Agile (Scrum), STLC, SDLC | JIRA & TestRail | Test design, debugging & defect lifecycle | Client / Partner technical support | Shift-left validation & release sign-off

SKILLS

Playwright | Node.js | JavaScript | Jest | Postman | REST APIs | HMAC / Partner Auth | JMeter | Core Java | Selenium WebDriver | TestNG | Cucumber (BDD) | Maven | Jenkins | Git | Sourcetree | CI/CD | JIRA | TestRail | SQL | MongoDB | Excel | Elastic Kibana | Agile (Scrum) | STLC | SDLC | Functional | Regression | Integration | System | Compatibility | E2E Testing | Manual Testing (iOS, Web, Desktop) | Mobile Testing | Client / Partner Support

PROFESSIONAL EXPERIENCE

Travel VIP October 2025 – Present PUNE | Senior QA Engineer

Travel VIP (Wishpoint Tech Pvt. Ltd., Pune) is a product-based travel technology company offering flight and hotel bookings, airport lounge access, travel insurance, and premium travel services through its web and mobile (iOS/Android) platforms, enhancing end-to-end travel experiences for global customers.

- Own end-to-end QA for Travel VIP travel products — manual testing on iOS app, web (PWA), and desktop flows, plus Playwright UI automation (tx-automation) for critical booking journeys (search → payment → confirmation).
- Perform functional, regression, and integration testing across Flight, Hotel, Lounge, Cab, eSIM, and related modules; validate UI/UX, payment flows, booking status, and cross-browser / device behaviour before releases.
- Built and maintain Node.js / Jest B2B API automation for Hotel + Flight partner APIs — auth hop, HMAC-SHA256 signing, tagged regression packs (SMOKE, VALIDATE, E2E, PRICE, CANCEL), and payload validation by error.code.
- Created dynamic Postman collections for OW/RT, multipax, SSR, and cancel scenarios with resolve-then-sign scripts; use them for API checks, partner onboarding, and quick defect reproduction.
- Provide technical support to B2B partners and internal teams — troubleshoot booking failures, API/auth/signature issues, PNR/cancel queries, and guide clients on integration and test data setup.
- Work closely with Product and Engineering on acceptance criteria, defect triage (JIRA), and release sign-off; shift-left API/UI checks to reduce manual retest before partner-facing deployments.
- Ran JMeter performance and load tests on critical booking and partner APIs — measured throughput, latency, and error rates under concurrent load to flag bottlenecks before high-traffic travel windows.
- Mentored junior QA on Playwright/Jest framework patterns, Git branching, and peer code reviews so new automation scripts stay consistent, reviewable, and easier to maintain across the team.

- Introduced early API and UI automation into the sprint (shift-left) so defects were caught before UAT; cut average QA cycle time by ~30% and sped up release readiness for partner-facing builds.

Musafir.com April 2023 – October 2025 PUNE | QA Engineer

Musafir.com is a well-known online travel agency based in the United Arab Emirates (UAE) that offers a range of travel-related services such as flight bookings, hotel reservations, holiday packages, visa services, and more.

- Designed and developed scalable automation frameworks using Selenium WebDriver, TestNG, Core Java, Maven, and JMeter for Web, API, and Performance Testing, following Page Object Model (POM) and data-driven approaches.
- Automated Functional, Regression, and Integration test scenarios for Flight Booking and Payment modules, improving test coverage and reducing manual effort.
- Implemented API Automation using Postman, Rest Assured, and JMeter, validating REST endpoints, JSON/XML responses, authentication mechanisms, and end-to-end business workflows.
- Integrated automated test suites with Jenkins CI/CD pipelines, enabling Continuous Testing, faster build validation, and early defect detection in Agile release cycles.
- Developed modular, reusable, and maintainable automation frameworks, enhancing scalability and optimizing execution time across multiple projects.
- Actively contributed in Agile (Scrum) ceremonies including Sprint Planning, Daily Stand-ups, Grooming, and Retrospectives, ensuring alignment with SDLC and STLC processes.
- Mentored junior QA team members on automation best practices, framework architecture, coding standards, and effective test strategy implementation.
- Managed defect lifecycle using JIRA and TestRail, creating detailed bug reports, execution logs, traceability matrices, and test documentation to ensure quality compliance.
- Troubleshooting environment configuration and tool integration issues, improving test stability, reliability, and overall automation efficiency.

EDUCATION

Bachelor of Engineering (B.E.), SBP University, Pune

DECLARATION

I hereby declare that the above-mentioned information is true to the best of my knowledge and belief.
